Poster design: Filippo Bertoni.

The Ringvorlesung draws from two current research clusters and their extended network:

the research project “Animals as Objects: Zoological Gardens and the Natural History Museum Berlin, 1810 to 2020” between *Museum für Naturkunde, Berlin; Zoologische Gärten, Berlin; and Humboldt Universität, Berlin;*

and the research theme “The Body of Animals” Department III at the *Max-Planck-Institut für Wissenschaftsgeschichte.*

Languages: English and German.
Mondays, from 16:15 to 17:45.

Please register by emailing gloria.baur@mfn.berlin to receive the zoom link, and further technical information.

Animals as Objects?

This interdisciplinary and international Ringvorlesung examines the role of animals in institutional and infrastructural arrangements, past and present. It investigates the processes by which animals are turned into *objects* – living zoo attractions, museum exhibits, diplomatic tokens, commodities, laboratory tools, data sets, and more. The aim is to understand the trajectories, traffics and transformations of animal-objects within and between different sites in their global, political, scientific and cultural context.

We will examine how animals—dead and alive—have been collected, transported, classified, processed, used, understood, and displayed at different times. Presenting shared concerns around the politicization, datafication, and commodification of animals (or animal parts) the lectures will offer an extended understanding of agents, institutions, and infrastructures as human/non-human co-productions. Researchers from contemporary history, the history of science, cultural anthropology, cultural studies as well as environmental history and political theory will explore specific encounters between animal bodies, knowledge practices and material cultures in different local and global settings spanning from colonial times to the present day. By investigating how animals are perceived, studied and managed, and their environments and worlds are represented, recreated, or imagined, the RVL explores how these processes contribute to the shaping of institutions, infrastructures, and politics. In what ways have animals been used, studied, and classified as objects? What has historically been made to count as an animal and what role do they play in signifying human socialities, just as much as the natural world?

The RVL invites to engage in the work of historicizing ‘naturalized’ views, of closely investigating the politics of care and the economics of conservation, of challenging a static notion of animals as ‘objects’, and thereby critically interrogating traditional, still effective roles, meanings, orders of knowledge, images and narratives of animals.
